

Basement Technologies Expands Into the St. Catharines Market for Foundation Repairs & Waterproofing!

June 1st, 2010 - St. Catharines, Ontario, Canada - Basement Technologies, a waterproofing and basement foundation repair contractor just announced their expansion into the City of St. Catharines and surrounding areas.

The St. Catharines market is easier to service for external waterproofing compared to many other markets in Ontario because of the low-grade soil which is typically only 4” feet deep. In other cities, the grade can reach depths of 6-8” feet deep.

“Our decision to expand into the St. Catharines area was an easy one. Unlike Toronto, St. Catharines is much easier to access given the lack of traffic coming and going and helps our fleet of trucks to reach areas within a reasonable amount of time.” says **Ed Gravely, Owner.**

“We’ve already been working with the City of St. Catharines Building Department to provide our services for their FLAP - Flood Alleviation Program. The City of St. Catharines will award residential home owners up to \$3,000 in rebates for the installation of backwater valves, sump pump and other de-watering systems. This means we can pass on the savings to our customers directly since the City of St. Catharines Environmental Department will pay Basement Technologies directly for its services performed,” ads **Mr. Gravely.**

For more information about the City of St. Catharines “FLAP” program, go here:

http://www.stcatharines.ca/cityservices/citydepartments/engineering/eng_environmental_flap.asp

“St. Catharines is an untouched market when it comes to waterproofing companies. We hope to help homeowners to finish their basements and realize their dreams by guaranteeing a water-free basement and provide their families with a clean living environment.” says **Ed.**
